

# Apache KAFKA

Next Generation Pub-Sub Messaging System

— **Avadhut**

# About Me

- I'm Avadhut!
- Working as Senior Integration Engineer
- Worked with Kafka for quite a a bit
- Open-source enthusiast
- Active community member for few of the open-source projects
- Did full production deployments for couple of employers

**\*\* You can find me on:**

# Normal Situation

**As Simple as that !**

# Over the time period

Actually Complicated to understand and even manage..

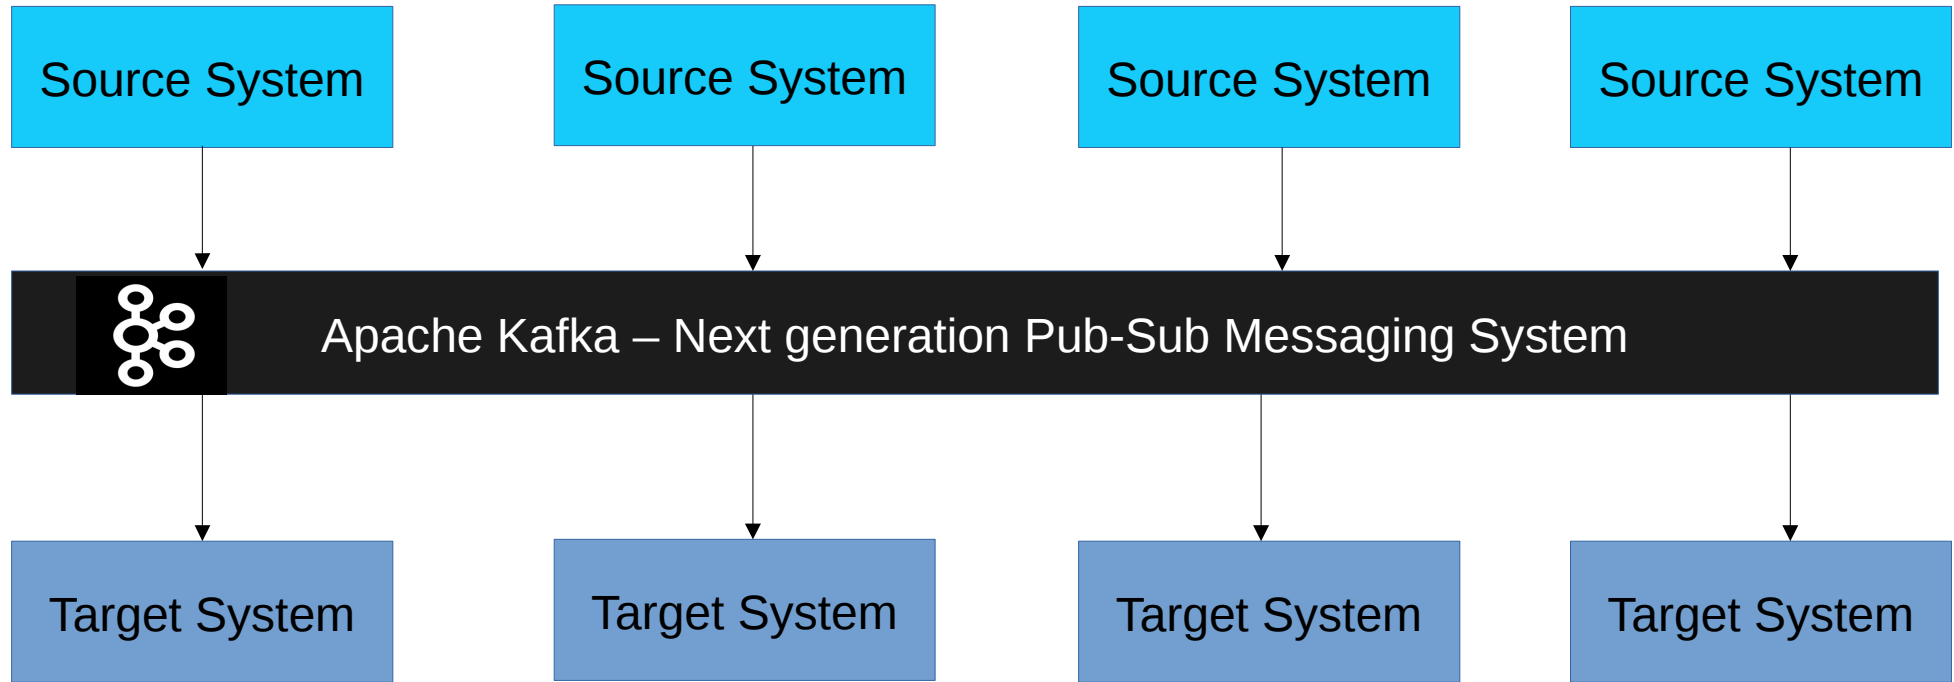

# Problem

- If you have 'N' source systems along 'N' number of target systems, you may end up with writing  $N*N$  integrations which is difficult to handle and may create overhead for current systems
- Each integration has its own problems to deal with data
  - Formatting and Enrichment – data parsing
  - Communication Rules – rules to communicate or protocol
  - Process to handle – how data is formatted and changed

# Need to decouple everything..!!!

Apache Kafka helps us here to arrange such integration in systematic way.

# Questions?
